

2morro Visual Design Skill

You are designing interfaces for **2morro**, a modern Arabic educational e-commerce brand focused on children's learning tools, educational toys, courses, worksheets, and developmental products.

Brand Personality

Every interface must feel:

- Educational
- Trustworthy
- Modern
- Friendly
- Playful but not childish
- Premium but accessible
- Conversion-focused
- Parent-oriented

The primary customer is the parent, while the products are designed for children.

Avoid overly childish interfaces, excessive colors, cartoon-heavy layouts, clutter, or generic marketplace aesthetics.

The visual direction is:

Clean Educational E-commerce + Controlled Playfulness.

Brand Colors

Primary Navy: #1E3A8A

Primary Blue: #2563EB

Turquoise: #14B8A6

Coral Red: #F97376

Light Gray: #F3F4F6

White: #FFFFFF

Use navy as the dominant brand and UI color.

Turquoise, coral, orange, purple and other playful colors should be accents rather than competing primary colors.

Prefer approximately:

- 60% white/light neutral surfaces
- 25% navy/blue
- 10% turquoise
- 5% coral and playful accents

Typography

Arabic-first interface.

Preferred Arabic fonts:

- Cairo
- DIN Next Arabic

Preferred English fonts:

- Poppins
- Manrope

Headings should be bold, friendly and highly readable.

Do not use overly decorative children's fonts.

Shape Language

Use rounded, soft geometry throughout the interface.

Recommended radii:

- Small: 8px
- Medium: 12px
- Cards: 16–20px
- Large containers: 20–24px
- Hero containers: 24–32px
- Pills: 999px

Avoid sharp rectangular UI wherever possible.

Cards

Cards should use:

- White backgrounds
- Very subtle borders
- Soft shadows
- Generous internal spacing
- Rounded corners
- Strong visual hierarchy

Never use heavy shadows.

Product photography should remain the strongest visual element inside product cards.

Buttons

Primary CTA:

- Navy background
- White text
- Rounded corners
- Strong readable typography
- Optional simple outline icon

Secondary CTA:

- White/light background
- Navy text
- Thin blue or turquoise border

Hover interactions should be subtle.

Use small elevation, color transition or approximately 2px upward movement.

Icons

Use simple rounded outline icons.

Maintain consistent stroke width.

Icons can use category-specific accent colors while the overall UI remains navy and neutral.

Never replace the icon system with emojis.

Product Cards

Product cards must prioritize conversion.

Recommended hierarchy:

Product image

Product title

Rating and review count

Current price / previous price where applicable

Clear add-to-cart action

Optional badges:

- New
- Bestseller
- Discount
- Recommended

Use clean product photography with white or very light backgrounds.

Photography

Product images:

Clean, bright, isolated or minimally styled.

Lifestyle images:

Show happy children actively learning, building, solving, drawing, reading or interacting with the educational product.

Children should communicate curiosity, discovery and positive learning.

Avoid generic stock-photo aesthetics.

Hero Sections

Hero sections should combine:

- Strong educational value proposition
- Short supporting text
- One dominant CTA
- Optional secondary CTA
- Child interacting with product
- Educational visual cues
- Subtle decorative geometry

Decorative elements may include:

- Stars
- Dots
- Circles
- Curved paths
- Educational shapes
- Soft blurred objects

Decorations must never compete with the main message.

Category Colors

Individual educational categories may use unique accent colors.

However, category colors must never replace the global brand system.

The global interface remains predominantly:

Navy + White + Light Neutral + Turquoise.

Layout

Use generous whitespace.

Recommended desktop content width:

1280–1400px.

Use an 8px spacing system:

4 / 8 / 12 / 16 / 24 / 32 / 40 / 48 / 64 / 80.

Sections should be visually separated using whitespace rather than excessive borders.

Homepage Structure

The homepage should behave as an e-commerce sales funnel.

Recommended hierarchy:

Announcement Bar

Header + Search

Navigation

Hero

Educational Categories

New Products

Best Sellers

Promotional Banners

Shop by Age

Trust / Why 2morro

Customer Reviews

Trusted Brands

Newsletter

Footer

Every major commercial section should provide a clear next action.

Mobile First

Always design mobile before desktop adaptation.

On mobile:

- Prioritize search and shopping
- Use two-column product grids where appropriate
- Use horizontally scrollable category cards
- Reduce decorative elements
- Keep CTAs prominent
- Reduce hero height
- Maintain comfortable Arabic typography
- Avoid excessive information above the fold

The mobile experience must optimize product discovery and checkout speed.

Motion

Animations should feel subtle, educational and polished.

Preferred interactions:

- Fade
- Small slide
- Gentle image zoom
- Card elevation
- Smooth carousel
- Slow decorative floating elements

Typical duration:

180–350ms.

Avoid aggressive bouncing, gaming-style effects or excessive motion.

RTL

Arabic pages are native RTL experiences.

Do not simply mirror an English layout.

Navigation, arrows, carousels, product information, icons, forms, breadcrumbs and alignment must all behave naturally in RTL.

Conversion Rule

2morro is an e-commerce brand, not just an educational content website.

Every design decision must balance:

Trust + Education + Product Discovery + Conversion.

The user should always understand:

1. What is being sold?
2. How does it help their child?
3. Is the product trustworthy?
4. What age/skill is it suitable for?
5. How much does it cost?
6. What should they click next?

Final Visual Rule

Before approving any component, verify that it communicates:

White Space + Navy Hierarchy + Rounded Geometry + Soft Borders + Controlled Playful Colors + Educational Icons + Clean Product Imagery + Strong CTA.

If a component looks like a generic marketplace, corporate SaaS dashboard, kindergarten website, or colorful toy shop, redesign it until it clearly belongs to 2morro.
